

# ForkCast

Group 26

Madison Book, Cynthia Espinoza-Arredondo, Alice Guth, Griffin Pitts

## Our Mission

Deciding where to eat is arguably the biggest challenge in daily life. You know your favorite restaurants, but you're looking for something new and exciting. Look no further than ForkCast. While most food ordering apps focus solely on convenience, ForkCast leverages past orders, stated preferences, and emerging dining trends to deliver tailored recommendations that guide users toward exciting new restaurants. By reducing decision fatigue for consumers and providing restaurants with greater visibility to new customer segments, ForkCast creates value on both sides of the market.

## Our Stakeholders

We proudly support our customers, restaurant staff and managers, delivery partners and drivers, app developers, project managers, payment providers, investors, and local regulatory bodies.

## Our Development Strategy

We're leveraging the latest tools in software to bring you a food delivery service like never seen before. From a clean, minimal user interface to a personalized recommendation algorithm, here's how we do it.

## Our Milestones

Users can create a secure account with specific, role-based permissions.

Restaurants can create a secure account with specific, role-based permissions.

Users can input cuisine preferences, allergens, and rate previously visited restaurants and menu items.

System will recommend restaurants based on user preferences, allergens, and previous reviews.

User can select a restaurant to view menu items and associated allergen and nutritional information.

System will recommend menu items based on user preferences, allergens, and previous reviews.

User can place an order, select between delivery and pick-up options and define a desired ready time.

Restaurant can receive, fulfill, and cancel orders. Users receive real-time status update notifications.
